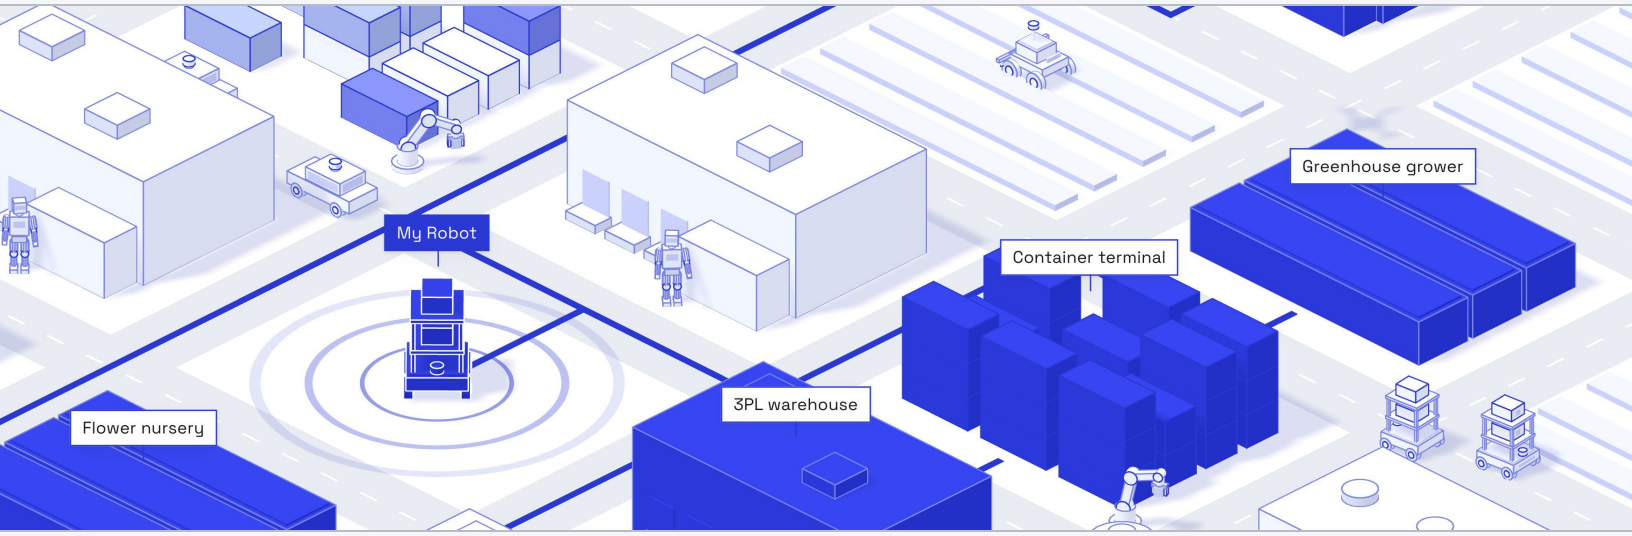
Make work easier for your team. Keep the work going.

Some jobs are heavy, dirty, repetitive, or dangerous. A missed step or error can slow down the whole line. We help you find robots that can take on that work.

Book a 30-minute call



DO YOU HAVE THESE CHALLENGES?

- Hard physical work tires people and causes injuries.
- People do not come to work, or do not want to do this job. Orders wait, and the rest of the team works overtime.
- Work by hand takes longer, costs more and leads to mistakes. One slow step holds everything back.

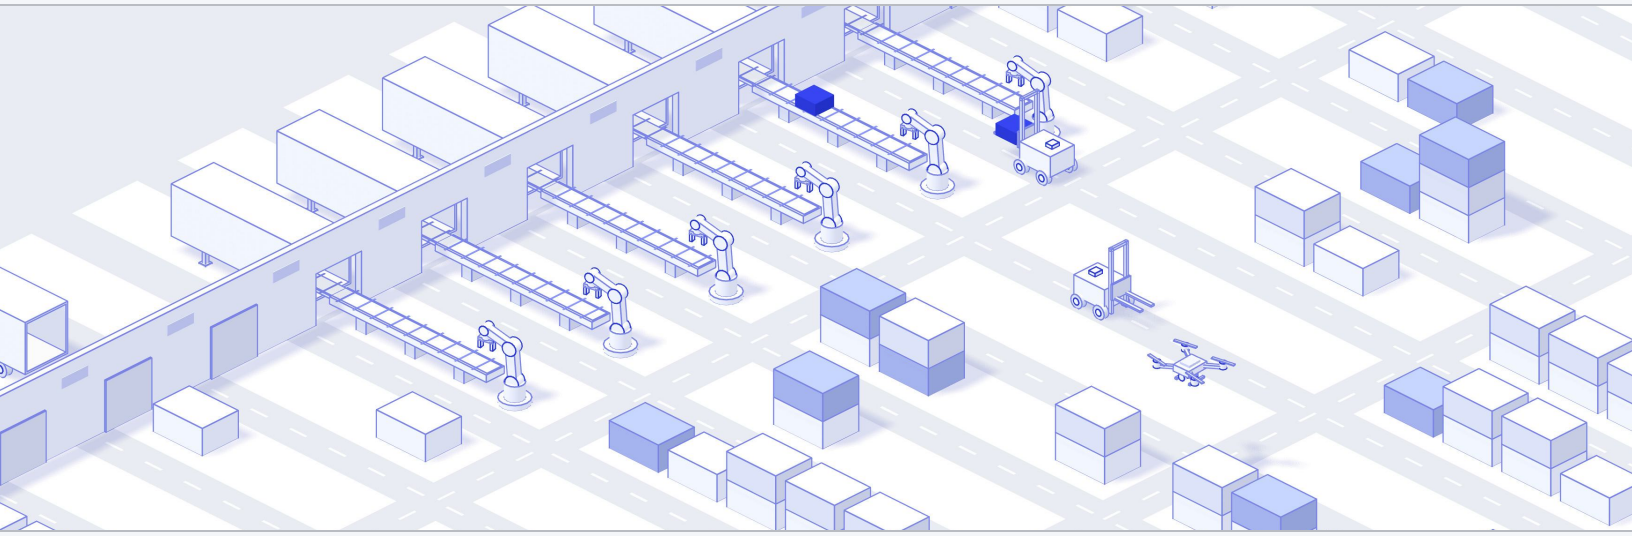
Businesses like yours already use robots.

Every day, our platform analyzes tons of data about robots and automation. It shows who uses which robots, and where.



HOW IT WORKS

- Our platform tracks which robots and machines companies already use.
- It covers thousands of robot makers across the US and what each of their robots can do.
- It uses AI to read public data. It reads much more than a human analyst can.
