You build robots.
We help you sell them.

Your robot could work in several industries. We help you choose where to focus your sales time, then find the buyers to approach first.

MARKET RESEARCH

Which industry should you sell to first?

If your robot moves carts, here's how we'd compare hospitals and factories.

- What the job costs buyers today and who already pays to automate it.
- What you could earn per sale after hardware, installation and support.
- How long a sale might take and whether buyers could order for more sites.

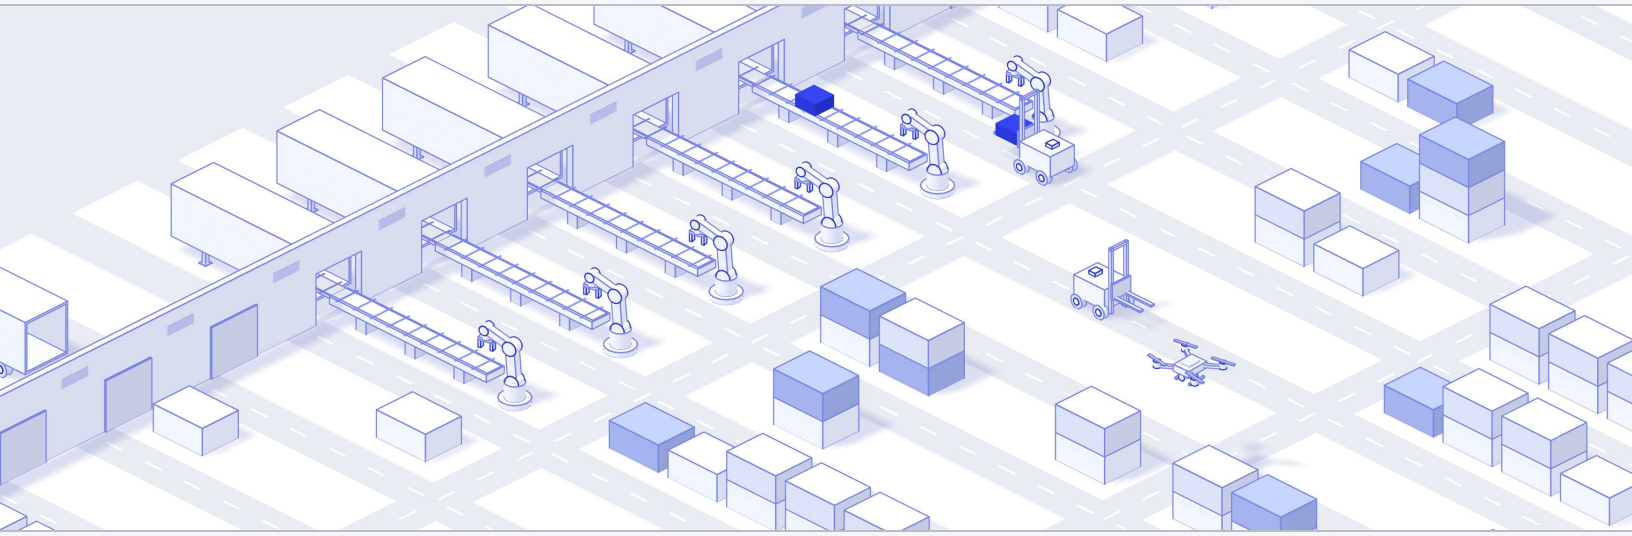
Who else has work for your robot?

In 2021, FedEx Ground installed Berkshire Grey robots to sort small packages at its Queens, NY facility. If you make sorting robots, we'd look for other facilities that still sort similar packages by hand.



PAID SALES PARTNERSHIP

- We use our platform to find companies with the right work and signs they're ready to buy. We show you why each one fits.
- We find the person who runs that operation and help your team write the first message and follow up.
- One of us stays with your team through demos, pilots and proposals as you work toward a signed contract. And we stay for what comes after.
